

Create a professional **Mutual Fund Advisory & Portfolio Optimization Dashboard** using Python, Streamlit, Pandas, NumPy, and Plotly. Analyze multi-period returns, risk-adjusted metrics (Sharpe, Sortino, Alpha, Beta, Standard Deviation), expense ratio, fund ratings, fund managers, and categories. Include interactive filters, long-term fund recommendations, short-term momentum screening, fund-manager rankings, risk-vs-return and Sortino-vs-return charts, portfolio allocation for different risk profiles, and an Efficient Frontier simulation with recommended fund weights and investment amounts. Make the dashboard responsive, visually professional, easy to use, and suitable for finance professionals and investors.
